Introduction

This Tech Note guides you through the process of re-creating the Factelligence Middleware COM+ application when the Server name is changed.

Application Versions

- Wonderware® Factelligence 3.4
- Microsoft® Windows Server 2003 and later

Procedure

You will need to go to Component Services and delete/re-create the Factelligence COM+ application. You must create the application, then install the Factelligence COM+ components.

To create a new Factelligence COM+ application

1. Open the Component Services window using Administrative Tools/Component Services.
2. Delete the existing Factelligence COM+ application.
3. Click **Yes** to confirm the deletion.
4. In Component Services right-click **COM+ Application** and select **New/Application**. The **COM+ Application Install Wizard** appears.
5. Click next and select **Create an empty application**.
6. Click **Next**.

7. Type **Factelligence** as the application name, and select the **Server application** option.
8. Click **Next**. The **Set Application Identity** wizard appears.
9. Select **Interactive user - the current logged on user** or the appropriate option.

10. Click **Next**. The **Add Application Roles** wizard appears. The **CreatorOwner** role appears by default.
Figure 7: Add Application Role Wizard

11. Click **Add role** to add a different role, or click **Next**.

12. Click **Next**, then **Finish**.

**To install the Factelligence COM+ components**
1. In the Component Services window, expand the **COM+ Applications** folder and locate the Factelligence application that you created.

2. Expand the **Factelligence** folder.

3. Right-click the **Components** sub-directory and select **New Component**.

4. Click **Next** and click **Install new component(s)**.

**Figure 8: New COM+ Component Install Wizard**

---

**Figure 8: New COM+ Component Install Wizard**

4. Click **Next** and click **Install new component(s)**.
5. Locate the **Middleware** directory and select all the .dlls using the **Ctrl+A** keys (Figure 10 below). The Middleware directory default location is *C:\Program Files\wonderware\Factelligence\Middleware*.

6. Click **Open**.
7. When the **Install new components** wizard appears, click **Next**, then **Finish**.
8. Wait several minutes for the components to be registered.

9. In the Middleware directory, double-click the **FactelligenceCFGEditor.exe** and provide the correct SQL Server network name and login permissions.

   - You must provide Administrator-level permissions.
   - The SQL Server is usually deployed on a different node. If it is on the same machine, you can provide **localhost** as the machine name.
   - You can click **Test** to confirm the connection.
10. Close the CFG Editor by clicking the X at the upper-right.

11. Using the Computer Management window, locate the local Groups and confirm the DistributedCOM Users group has the permissions shown in Figure 13 (below).
